

**In the Claims:**

Kindly amend the claims as follows:

1. (currently amended) A device for dispensing grout, comprising:
  - a grout holding member, having a first end and an oppositely positioned second end;
  - a plunger member, within said grout holding member; ~~and~~
  - a first nozzle member, at said first end of ~~in communication with~~ said grout holding member; and
  - a second nozzle member, at said second end of said grout holding member;
  - wherein said plunger member moves from a position adjacent to said first end of said grout holding member to a position adjacent to said second end of said grout holding member, said plunger in direct contact with said grout and pushing said grout out from said second nozzle member.
2. (previously presented) The device of claim 1, further comprising a second nozzle member.
3. (previously presented) The device of claim 1, further comprising a removable first nozzle.
4. (previously presented) The device of claim 1, in combination with a source of compressed air.

5. (previously presented) The device of claim 1, wherein said grout holding member is a cylinder.
6. (previously presented) The device of claim 1, wherein said plunger member is a disc shaped.
7. (previously presented) The device of claim 1, wherein said plunger member expands to fill a horizontal plane within said grout holding member.
